

# **General Information**

# Thermocouple and Extension Wire Color Codes

#### **United States and International Color Coding**

Standard ASTM E 230 color coding (United States) is used on all insulated thermocouple wire and extension wire when insulation type permits. In color coding, the right is reserved to include a tracer to identify the ASTM E 230 type. Thermocouple grade wire normally has a brown overall jacket. For Types R and S, the color codes correlate to the compensating cable normally used. Various national and international standard agencies have adopted color codes for identifying thermocouples, which generally differ from those specified in ASTM E 230. The overall extension color code is also used to identify connectors to specific thermocouple types.

#### Thermocouple and Extension Wire Color Codes

#### Manufactured to Exact Specifications

Since 1914, SERV-RITE<sup>®</sup> thermocouple wire and thermocouple extension wire have been recognized for premium performance and reliability. All stock and custom wire is manufactured in Watlow's plant where materials, manufacturing equipment and quality controls are carefully selected to ensure superior uniformity.

Watlow<sup>®</sup> offers popular wires as well as custom manufactured wire using alloys and insulation types to meet specific application demands.

All SERV-RITE thermocouple wire and thermocouple extension wire is manufactured under rigid quality controls following ISO 9001 standards. In addition, all electromotive force (EMF) versus temperature calibration procedures follow one or more of the following standards:

- ASTM E 207
- ASTM E 220
- AMS 2750

All testing has NIST traceability. Unless otherwise specified, all SERV-RITE thermocouple wire and extension wire are supplied to meet standard tolerances of ASTM E 230. Special tolerances are also available.

### **Performance Capabilities**

- Compliance with recognized agency tolerances
- Insulation temperature ranges from -328 to 1300°F (-200 to 704°C)
- Tolerances from ±0.5°C or ±0.4 percent
- NIST calibration certificates
- ISO 17025 Accredited Lab

## **Features and Benefits**

**Type E, J, K, N, S and T thermocouple wire** • Fit virtually all applications

#### Compensation extension wire

· Permits fine tuning of temperature measuring circuits

#### Solid or stranded wire

• Meets specific application requirements

#### Wide selection of insulation types

• Meets temperature, chemical, moisture and abrasion resistance objectives

#### **Color coding**

• Complies with United States, United Kingdom, German, Japanese and IEC standards

#### Metallic overbraids and wraps

• Enhance abrasion resistance

#### Stock RTD lead wire

• Meets virtually all industrial RTD applications

## **Stock Wire Products by Temperature**

## Ordering Information How to Order

Include the following information when ordering SERV-RITE thermocouple and extension wire:

#### Calibration

• E, J, K, N, S or T

#### Gauge size

• AWG gauge

#### Solid or stranded conductors

• Stranded conductors are seven strand constructions. If other configurations are required, please contact the factory.

#### Thermocouple or extension grade

• Determine if it will be used for the actual sensor or only to "extend" the signal at lower temperatures.

#### Standard or special limits of error

• This will determine the accuracy of the sensor. Limits of error are determined by testing at a pre-defined Watlow standard test point. To guarantee limits of error at other temperature points, please contact the factory to arrange special testing.

#### Insulation on singles and duplex

• The insulation material used is usually chosen to fit the environment where the sensor will be used.

#### **Color coding**

• Unless specified, all color coding is to ASTM E 230 standards.

#### **Spool lengths**

 Spool length requirements should be specified. Watlow strives to maintain a policy of shipping 1,000 foot spools. However, if not specified, random lengths may be shipped. If special packaging is required, please contact the factory.

#### Variation in quantity

• Watlow follows the industry standard of shipping and invoicing at plus or minus 10% of the cost for any ordered item. If requirements dictate anything other than plus or minus 10%, contact the factory for potential additional charges.

#### **Overbraid options**

• Options for overbraid are shown below.

#### Overbraid selection code

• S-Stainless steel wire braid

C-Tinned copper wire braid

N-Alloy 600 wire braid

Options are listed on each page. Special requirements and testing are available at additional cost. Contact the factory for details. These include:

#### Shielding

Some constructions are available with shielding possibilities.

#### **Calibration tests**

• If calibration is required, please specify temperatures.

#### **Certificate of compliance**

• These may be provided for various specifications. When ordering, please provide specification requirements.

#### **Special requirements**

• Please contact the factory for any requirements not listed above.

## **Availability**

**Stock constructions:** Many constructions are available for same day shipment.

**Stock constructions with options:** Shipment is usually within five working days or less.

**Stock constructions requiring calibration or other laboratory services:** Shipment is usually within five working days or less.

## **Technical Data**

## How to Select Wire to Meet Requirements

The following information will explain some of the nomenclature associated with thermocouple wire and thermocouple extension wire. By reading this information, orders can be placed quickly and accurately.

#### Thermocouple Wire or Thermocouple Extension Wire

There are some significant differences between wire used to actually measure temperature and wire used to carry a millivoltage signal to an instrument.

The most obvious difference is the color-code used to identify the wire itself. In most instances, thermocouple grade wire is identified by its overall brown color. Exceptions in the SERV-RITE wire product line are the very high temperature yarns such as those used in the SERIES 301 and 350. Of course, the overall color code is not used if there is no overall covering, as in SERV-RITE wire SERIES 505, 511 and 314.

The functional differences between the two wires are that thermocouple "extension" wire is not calibrated above 400°F (204°C). The temperature rating of the insulations used on some extension grade wire exceeds 400°F (204°C) temperature to allow the wire to survive occasional contact with hot parts or furnace walls.

Terms used in the tables of this section:

#### **Single Conductor Insulation**

Identifies insulation type used on individual thermoelements. Certain part numbers use a combination of insulations. When there is a combination, insulations are listed in order of application.

#### **Duplex Conductor Insulation**

Lists the overall insulation when one is used. Constructions which have no overall insulation use this area to describe the duplexing method—i.e. twisting, "ripcord," etc.

#### **Temperature Rating**

Most constructions are rated for both continuous use and for single reading applications. Continuous use temperature is considered to be the highest temperature a particular construction will survive indefinitely. The single reading temperature is the highest temperature at which the construction will perform and continue to produce an accurate reading. However, after exposure to the single reading temperature, the wire will exhibit less flexibility and/or abrasion resistance. Therefore, it is not likely that the wire could be removed from the application and then reused.

#### ASTM E 230 Color Code

Generally, SERV-RITE wire has color codes wherever possible. Exceptions are high temperature yarn constructions such as the SERIES 301 and 350. Color coding of the SERIES 511 and 512 is accomplished by including a colored thread or "tracer" under the tape.

#### **Physical Properties**

**Abrasion Resistance** is rated fair, good or excellent and is based on the wall thickness of the construction and how well it survives with other insulations of similar thicknesses. The 511 SERIES receives an excellent rating because the thin wall of polyimide tape will survive better than almost any other insulation applied in the same wall thickness. The "absolute" abrasion resistance of a construction will depend not only on the type of insulation, but on thickness at which it is applied.

*Moisture Resistance* ratings are given for wire in the "as received" condition. In the case of fiberglass insulated wire, moisture resistance is achieved by using impregnations or spirally applied tapes called moisture barriers. The impregnations and/or tapes will burn off at temperatures below the upper useful operating temperatures of the fiberglass. The thermoplastic insulations (PVC and fluoroplastics) and polyimide insulated constructions will maintain their moisture resistance up to their "continuous" temperature rating.

**Chemical Resistance** ratings are applied as they relate to most common chemicals. These ratings apply to insulation types and not necessarily to the type of impregnation used. Contact the factory for specific applications.

### Technical Data (Continued)

#### **Metallic Overbraids and Wraps**

Although standard SERV-RITE wire products are designed to yield a high degree of abrasion resistance, it is sometimes necessary to add an additional metallic covering to further enhance this property. Following are available overbraids and wraps.

#### Stainless Steel Wire Braid (S)

This most popular overbraid uses 300 series stainless steel and is available on virtually all standard SERV-RITE wire offerings. It is an economical method to extend the life of thermocouple and extension wire. Several of Watlow's standard wire items are available from stock with a stainless overbraid. Non-stock items are available as a special order.

#### Alloy 600 Wire Braid (N)

Most commonly specified on high temperature SERV-RITE wire yarn insulations, the Inconel<sup>®</sup> braid offers a higher operating temperature than the series 300 stainless steel overbraid. When this braid is specified on SERV-RITE SERIES 350, the performance of the material is only surpassed by metal-sheathed cables. Consult the factory for availability on specific wire items.

#### Tinned Copper Wire Overbraid (C)

When there is a possibility of electrical interference in the area of the thermocouple installation, it may be necessary to shield the wire from electrical "noise." Several Watlow standard products use aluminized tapes as an intrinsic shield. If shielding is needed on other constructions, a tinned copper shield can be specified as a special order.

## Fiberglass Braided Thermocouple and Extension Wire SERIES 304

The uniform quality and availability of the SERIES 304 make it the ideal wire for general applications requiring moderate abrasion and moisture resistance, wide temperature capabilities and economy.

Each conductor is covered with a color coded glass braid. This braid is impregnated to enhance abrasion resistance and reduce fraying. The insulated single conductors are laid parallel and covered with another layer of woven glass. A final impregnation is then applied to the glass.

For higher temperatures, consider SERIES 321.

### **Performance Capabilities**

- Continuous temperature rating: 900°F (482°C)
- Fiberglass braided yarn insulation
- Available with an optional metallic overbraid for additional abrasion resistance

## **Applications**

- Heat treating
- Oven
- General use

#### **Specifications**

#### Continuous use temperature

• 900°F (482°C)

#### Single use temperature

• 1000°F (540°C)

#### Resin retained to 400°F (204°C)

## Fiberglass Wrapped Thermocouple and Extension Wire SERIES 305

SERIES 305 is specifically constructed for light duty applications where size is a critical factor. Single conductors are insulated using a specialized yarn wrapped around the conductors in layers. Yarn is then impregnated to add abrasion resistance and enhance electrical properties. The insulated single conductors are then laid parallel and covered with a layer of braided glass. A final impregnation is applied to the braid.

For higher temperature applications, use SERIES 321.

## **Performance Capabilities**

- Continuous temperature rating: 900°F (482°C)
- Fiberglass braided yarn insulation
- Yarn wrapped conductors for superior coverage on small gauge wires
- Available with an optional metallic overbraid for additional abrasion resistance

## High-Temperature Fiberglass Twisted Thermocouple Wire SERIES 314

The SERIES 314 is an economical construction for general, high temperature applications. The braided high temperature yarn is applied in a unique manner that allows SERIES 314 to be competitively priced with other fiberglass constructions. It produces a finished wire that performs at temperatures to 1600°F (870°C).

The conductors are insulated with braided, high strength fiberglass and impregnated to improve abrasion resistance. The impregnation is tinted to impart color coding to primary insulations. The insulated single conductors are then twisted together to yield a construction flexible enough for almost any application.

## **Performance Capabilities**

- Continuous temperature rating: 1300°F (705°C)
- Fiberglass braided yarn insulation
- Twisted design has no jacket
- Available with an optional metallic overbraid for additional abrasion resistance

## **Applications**

- Heat treating
- Aluminum stress relieving
- Steel annealing

## **Specifications**

#### Continuous use temperature

#### • 1300°F (705°C) Single use temperature

1600°F (870°C)

#### Resin retained to 400°F (204°C)

## High-Temperature Braided Fiberglass Thermocouple Wire SERIES 321

The addition of color coding and impregnation to the high temperature fiberglass make this wire the next logical step for systems, which exceed temperature capabilities of the standard glass insulated series.

Each conductor is covered with a color coded, high temperature fiberglass braid. This braid is then impregnated to enhance abrasion resistance and reduce fraying. The insulated conductors are laid parallel and covered with another braid of high temperature fiberglass and impregnation.

## **Performance Capabilities**

- Continuous temperature rating: 1300°F (705°C)
- Heavy fiberglass braided yarn insulation
- Twisted design has no jacket
- Available with an optional metallic overbraid for additional abrasion resistance

## **Applications**

## Polyvinyl Chloride (PVC) Insulated Extension Wire SERIES 502

SERIES 502 is an economical wire that has PVC for the primary and duplex insulation.

The primary and duplex insulation is PVC. It yields a construction that is inexpensive and performs continuously at temperatures up to 220°F (105°C).

SERIES 502 is often used in conduit and wiring trays here its flexibility allows for easy installation. It can be easily stripped using hand tools or mechanical methods.

## **Performance Capabilities**

- Continuous temperature rating: 220°F (105°C)
- Flexible PVC plastic insulation
- Available with an optional metallic overbraid for additional abrasion resistance

## Applications

## **PVC Insulated "RIPCORD" SERIES 505**

The SERIES 505 is the most economical wire produced. Unlike some competitive "ripcord" type constructions, which use only a stripe to establish polarity, SERIES 505 single conductors are fully color coded. The conductors are individually insulated with the proper colored PVC and fused into "ripcord" using a proprietary process.

Insulated conductors can be easily separated by hand once the bond between conductors has been slit. As with other PVC insulated products, SERIES 505 lends itself well to both manual and mechanical stripping methods.

## **Performance Capabilities**

- Continuous temperature rating: 220°F (105°C)
- Flexible PVC plastic insulation
- "Ripcord" peelable construction
- Available with an optional metallic overbraid for additional abrasion resistance

## **Applications**

- Laboratory
- Test stand
- Automotive

# Small Gauge Fluorinated Ethylene Propylene (FEP) Insulated SERIES 506

The SERIES 506 is the smallest standard insulated wire construction. The thin FEP wall on both primary and duplex insulation yields a construction that can operate safely at temperatures far beyond common PVC and nylon insulations.

The SERIES 506 is fully color coded for easy installation. Its small size allows use in high density circuits. Response time is minimized by small diameter conductors. For larger diameter gauge sizes than #28, specify SERIES 507.

# **Performance Capabilities**

- Continuous temperature rating: 400°F (204°C)
- Flexible FEP plastic insulation
- Thin insulation wall for a compact construction
- Available with an optional metallic overbraid for additional abrasion resistance

## **Applications**

- Laboratory
- Test stand

## FEP Insulated Thermocouple and Extension Wire SERIES 507

The SERIES 507 is the most economical fluoroplastic insulated wire. Individual conductors are coated with a layer of color coded FEP. The insulated conductors are then parallel duplexed with an additional layer of color coded FEP. The finished construction has a continuous temperature rating of 400°F (204°C). Abrasion, moisture and chemical resistance exceed most other insulations.

This construction is widely used when pulling long lengths of wire through conduit. FEP's low friction coefficient and abrasion resistance are suited for these applications.

For higher abrasion resistance consider SERIES 514 Tefzel<sup>®</sup> insulated constructions.

For higher temperatures specify SERIES 508.

## **Performance Capabilities**

- Continuous temperature rating: 400°F (204°C)
- Flexible FEP plastic insulation

**Popular Constructions** 

• Available with an optional metallic overbraid for additional abrasion resistance

## **Applications**

## **TFE Insulated SERIES 508**

The primary and duplex insulation of SERIES 508 is fused TFE tape, which is spirally applied to the conductor and heated. This process, called sintering, forms the tape into a homogeneous layer. When sintered, the tape exhibits all of the advantages of extruded TFE insulation, while eliminating the concentricity problems associated with TFE extrusions.

The SERIES 508 is fully color coded and capable of continuous operation in excess of 500°F (260°C). Because the fusing process causes the duplex tape to fuse with the primary insulation, SERIES 508 is not recommended for applications where it is necessary to remove the outer tape while leaving the primary insulation intact.

## Applications

- Aircraft
- Petroleum processing

#### **Specifications**

#### Continuous use temperature

• 500°F (260°C)

Single use temperature

• 600°F (315°C)

#### **Resistance properties**

## FEP Insulated and Shielded Thermocouple and Extension Wire SERIES 509

The SERIES 509 was developed specially for use with microprocessor-based systems.

The conductors are insulated with color coded FEP. They are then twisted with a copper drain wire. An aluminized polyester tape is wrapped around the conductors and drain wire and then FEP is applied.

The finished construction can withstand temperatures in excess of 400°F (204°C). Twisted conductors minimize electromagnetic interference (EMI) and the shield tape eliminates most problems associated with AC "noise" in the sensing circuit.

## **Performance Capabilities**

- Continuous temperature rating: 400°F (204°C)
- Flexible FEP plastic insulation
- Twisted and shielded construction to reduce electrical noise interference
- Available with an optional metallic overbraid for additional abrasion resistance

## **Applications**

• General use extension wire

#### **Specifications**

#### Continuous use temperature

• 400°F (204°C)

#### Single use temperature

• 500°F (260°C)

#### **Resistance properties**

- Moisture: Excellent
- Chemical: Excellent
- Abrasion: Excellent

## **PVC Insulated and Shielded Thermocouple and Extension Wire SERIES 510**

The SERIES 510 is a PVC insulated, twisted and shielded construction for systems sensitive to induced voltages and "noise."

The conductors are insulated with color coded PVC and then twisted with a copper drain wire. An aluminized polyester tape is wrapped around the two conductors and drain wires to impart 100 percent shielding. Then, another layer of PVC is applied.

The twisting eliminates most EMI while the shield tape minimizes AC "noise" in the sensing circuit.

### **Performance Capabilities**

- Continuous temperature rating: 220°F (105°C)
- Flexible PVC plastic insulation
- Twisted and shielded construction to reduce electrical noise interference
- Available with an optional metallic overbraid for additional abrasion resistance

## **Applications**

• General use extension wire

#### **Specifications**

### Continuous use temperature

- 220°F (105°C)
- Single use temperature
- 220°F (105°C)

## **Resistance properties**

- Moisture: Excellent
- Chemical: Good
- Abrasion: Good

## Polyimide Insulated and Twisted SERIES 511

SERIES 511 is the most economical polyimide taped construction. Polyimide film applied to the conductors is considered to be the ultimate "soft" insulation. The tape maintains its strength at temperatures up to 600°F (315°C). The FEP laminate serves as a moisture barrier and allows the tape to fuse with itself. The finished construction will not unravel when cut.

SERIES 511 conductors are wrapped with the polyimide tape, which is fused to itself. Each conductor is color coded with a colored thread under the tape. The insulated conductors are twisted into a duplex construction to eliminate the overall duplex insulation and minimize cost.

## **Performance Capabilities**

- Continuous temperature rating: 600°F (315°C)
- · Polyimide fused tape insulation
- Twisted design has no outer jacket
- Colored tracer used to indicate calibration type
- Available with an optional metallic overbraid for additional abrasion resistance

## **Popular Constructions**

## **Applications**

- Aerospace
- Petrochemical
- Plastics

### **Specifications**

#### Continuous use temperature • 600°F (315°C)

- Single use temperature • 800°F (430°C)

#### **Resistance properties**

- Moisture: Excellent
- Chemical: Excellent •
- Abrasion: Excellent

## **Polyimide Insulated SERIES 512**

The SERIES 512 is a heavier duty version of SERIES 511 construction, using the same polyimide insulation. Color coding is accomplished using the same colored thread "tracers." The SERIES 512 has a duplex insulation of polyimide tape. The extra wall of tape yields a construction with increased abrasion resistance.

For higher temperature requirements, choose one of our fiberglass insulated wires.

For improved abrasion resistance, and easier color identification of conductors, specify SERIES 513 when contacting the factory.

## **Performance Capabilities**

- Continuous temperature rating: 600°F (315°C)

## **PFA Insulated Thermocouple** and Extension Wire SERIES 516

A relatively new fluoroplastic, perfluoralkoxy (PFA), is the insulation used for SERIES 516. PFA's temperature rating is only slightly less than TFE. However, PFA can be applied using conventional extrusion techniques.

This produces a smooth finish, as opposed to the spiral usually associated with TFE tape constructions. This is important in the foodservice equipment industry where taped constructions present cleaning problems. The smooth surface also allows this construction to be pulled through conduits and cut-outs more easily.

Once each conductor has been coated with a color coded PFA layer, they are laid parallel and coated again with PFA.

## **Performance Capabilities**

- Continuous temperature rating: 500°F (260°C)
- Flexible PFA plastic insulation
- Available with an optional metallic overbraid for additional abrasion resistance

## **Applications**

• General use extension wire
