

QUICKCOOL®

QuickCool®

QuickCool® was developed with our customers' needs and concerns in mind. The result - a standard engineered insulation blanket that increases energy efficiency by holding heat in, but quickly and easily opens up to provide quick cool-down time for the next process. No tools are needed, just a simple lift of the flap saves minutes per changeover, which can quickly turn into more production time and bigger profits. QuickCool® is a two-in-one insulation system, which allows heat to escape quickly while remaining securely attached to the barrel.

Benefits

- Allows heat to escape more rapidly
- Faster start-up time
- Lower ambient air temperature
- Safer work environment
- Easy installation
- Increased energy efficiency
- More production time
- High energy savings

QuickCool® fully enclosed to increase energy efficiency during high-temperature process job.

QuickCool® hook and loop flaps opened during process change over.
